PROFESSIONAL SUMMARY

Data Professional with an M.Sc. in Statistics and e-commerce BI experience in marketing, churn and pricing analytics. Built a public Dubai rental-yield and price-outlook app from Dubai Land Department data, comparing yields across communities; also built a GA4 funnel analysis with a purchase-propensity model. Uses SQL and Python for analysis and modeling, and Power BI, Looker Studio and Excel to turn results into decisions.

EDUCATION

- **M.Sc. Statistics** — Pondicherry Central University, Pondicherry, India *Sep 2023 – May 2025*
- **B.Sc. Statistics** — University of Calicut, Kerala, India *Aug 2020 – Mar 2023*

SKILLS

- **Programming & Databases:** Python (pandas, NumPy, statsmodels, scikit-learn, Matplotlib, Seaborn), SQL (BigQuery, DuckDB, MySQL; joins, CTEs, window functions)
- **Analytics:** Advanced MS Excel (Power Query, pivot tables), Google Sheets, GA4, funnel analysis, customer segmentation (RFM), marketing analytics (ROAS, CAC)
- **BI & Visualization:** Power BI (DAX), Looker Studio, Tableau
- **Machine Learning & Statistics:** Regression, classification (XGBoost, Random Forest), clustering, anomaly detection, feature engineering, model evaluation, hypothesis testing, A/B testing, time-series forecasting (SARIMA), EDA
- **Tools & Deployment:** Git/GitHub, pytest, Streamlit, LLM APIs (Gemini), Jupyter, VS Code

PROFESSIONAL EXPERIENCE

- **Business Intelligence Analyst** *May 2026 – Sep 2026*
  Techfaya Innovations Pvt. Ltd. Technopark, Kerala, India
  - **Marketing Analytics:** Built Google/Meta Ads dashboards in Looker Studio for 3 stores; recommended cutting saturated spend by about 25%, after which one store's ROAS rose from 9.8 to 11.6 and CAC fell **31%** the next month.
  - **Churn-Risk Scoring:** Built a 4-tier risk score from order-overdue ratios for **5,279 customers**; routed the 528 highest-risk accounts to sales for direct calls and set up win-back emails for the at-risk tier.
  - **Market Basket Analysis:** Ran Apriori on 74,000+ orders across 3 stores; on one store's 35,000+ orders, Fisher's exact test confirmed **63 of 70** candidate pairs (top lift 60.8, confidence 77%), forming a proposed bundling plan.
  - **Competitor Review Analysis (NLP):** Analyzed 27,000+ reviews of 100+ products from 14 competitors with an NLTK pipeline, surfacing **22 recurring defect themes** that fed product specs for a new brand's pre-launch.
  - **Pricing Automation:** Automated weekly competitor price tracking for **about 500 SKUs** across 6 competitors with Python and Google Apps Script, replacing manual price collection.

PROJECTS

- **Dubai Rental Yield & Price Outlook** *Oct 2026*
  Tools: DuckDB SQL, Python, SARIMA, Power BI, Streamlit, GitHub Actions [Live App | GitHub]
  - Analyzed 16 years of Dubai Land Department sales and 2026 rents in DuckDB SQL: outer communities yield up to **9.3%** and waterfront flats the least (Palm Jumeirah 4.8%); 12 of 37 flat communities beat the 6.9% average.
  - Designed a like-for-like gross yield (rent and price matched by community, type and size band) that corrected naive errors of up to **1.9 points**, after reconciling the data with the official DLD release.
  - Showed the 6–8% year-on-year fall in Dubai-wide off-plan price per sqm was **mostly a shift to cheaper areas**: within communities, median off-plan flat prices rose 3.9% and only 29% of communities fell.
  - Backtested SARIMA, naive and trend forecasts; after the March 2026 break naive won (**3.9%** vs 14.6% error), so the outlook uses scenarios instead of one forecast: ready flats +10.3% if the 2023–25 trend resumes, −16.6% if the fall continues.
  - Published a Power BI report and a public Streamlit app (yield map, price outlook, yield calculator) so investors can compare communities without code.

- **GA4 E-commerce Funnel, Purchase Propensity & AI Reporting** *Oct 2026*
Tools: BigQuery SQL, Python, XGBoost, Looker Studio, Gemini API [Dashboard | GitHub]

- Analyzed 270K users' GA4 events in BigQuery SQL (CTEs, window functions): checkout-to-payment was the largest leak at 59% pass-through, and a 6-point fix is worth about **$35K per quarter** (+10% revenue).
- Showed device, country and channel all convert at 1.5–1.6%, so the fix is checkout UX, not marketing mix; documented **4 GA4 tracking defects**, including out-of-order checkout events in 62% of sessions.
- Built a leakage-safe XGBoost purchase-propensity model on first-session behavior (5-fold stratified CV): PR-AUC 0.111 vs a 0.011 baseline; the top 5% of scored users captured 46% of later buyers (**9.3× lift**).
- Built a Looker Studio dashboard with an AI weekly KPI briefing: SQL computes every number and a Python validator checks Gemini's text, cutting weeks with reporting errors from **11/12 to 0/12**.

CERTIFICATIONS

- IBM Data Science Professional Certificate — IBM *Sep 2025*
- Data Science: Machine Learning — Harvard University (edX) *May 2025*
- Deep Learning Specialization — DeepLearning.AI *Oct 2025*
- Advanced Microsoft Power BI — Coursera *Jun 2025*
- Data Analytics with Python — NPTEL *Apr 2024*
- Master SQL for Data Science — Udemy *Jun 2025*
